Predictive Services Discussion:

Above normal temperatures will combine with breezy southwest to west winds at 12-22 mph with gusts to 30 mph and afternoon relative humidities of 5-15% to elevate fire weather conditions across the southern and western Great Basin, northern Arizona, northwestern New Mexico, far southwestern Colorado, northeastern California, and much of the Inland Northwest. Isolated to scattered showers and thunderstorms are possible over the Upper Mississippi Valley with areas of showers and storms likely across the central Plains, Mid-Mississippi Valley, and Mid-Atlantic States. More scattered showers and storms are forecast over the southern Great Lakes and the Northeast with lesser storm chances over the Southeast. Hot, dry and windy conditions are expected over the eastern Carolinas and northern Florida elevating fire potential once again. Dry conditions will continue in northeast Minnesota with minimum relative humidity falling to 38-43%. Above normal temperatures will continue in eastern Interior Alaska with isolated thunderstorms, while cooler conditions move into the western half of the state.
