Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Very hot temperatures reaching into the low 100s will continue across the California Central Valley and portions of southern California this afternoon with very low relative humidity of 10-20%. Winds will be light across most of California however. Afternoon highs 5-15°F above normal continue across the Great Basin and into Montana and Wyoming. Winds in Montana and Wyoming will be locally breezy, but generally not as windy as Monday. Near normal temperatures are expected across the Southwest and through the lower Mississippi Valley, while below normal temperatures are expected across the east coast. Moderate to heavy rain will continue across Florida and southern Georgia. Scattered showers and isolated thunderstorms are expected across the Wasatch and the Colorado Rockies. Mainly dry conditions will prevail elsewhere.
