Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Very warm and dry conditions will continue across most of the West today with afternoon highs 10-20°F above normal from the northern Rockies and Northwest south to California and Nevada. Maxima near 100°F are expected in the California Central Valley and portions of southern California. Very low relative humidity of 5-20% will persist in California, Nevada, eastern Oregon and Idaho, and poor overnight recovery of 20-40% is expected for mid-slopes and ridges. Breezy westerly winds are expected near and east of the Divide in Montana and Wyoming creating areas of elevated conditions as minimum relative humidity falls to 10-20%. However, temperatures will remain near to below normal in the Southwest. A stalled cold front along the northern Gulf Coast will keep scattered to widespread showers and thunderstorms with areas of heavy rain.
