Cumulative acres shown in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Breezy northerly winds are expected today in portions of the Sacramento Valley and southern California amid relative humidity of 10-15% creating elevated conditions. Downslope westerly winds are also expected in north-central Montana east of the Divide amid relative humidity of 15-25%. However, moisture from decaying Hurricane Polo will persist in the Southwest and Colorado today, with widespread wetting rainfall and areas of flooding as local amounts near 3 inches are possible. Scattered showers and thunderstorms are also expected north and eastward into the central Plains and Midwest. Farther east, dry and breezy south winds are expected in the southern Plains amid above normal temperatures creating locally elevated conditions. In the Lower Mississippi Valley, winds will be light but relative humidity will be very low for the area with minima of 20-35%.
